DETAILED ACTION

This Office action is in response to the Amendment After Final Rejection filed on December 14, 2005. Claim 20 was amended, and Claims 1-7, 16-19 and 21-47 were cancelled. In view of reconsideration, the indicated allowable subject matter of claim 20 has been withdrawn. A new Non-Final rejection set forth below.

Claim Objections

Claim 20 is objected to because of the following informalities:

- Line 18, "by directing ..." should be replaced by – and directing...-(for correcting typo error).

Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 20 is rejected under 35 U.S.C. 102(b) as being anticipated by Gadefelt (Patent Number 3,775,971).

Gadefelt discloses a combustion engine method that provides increased fuel efficiency and reduces polluting exhaust emissions by burning fuel in two stages, said fuel consisting of a first portion (Read as fuel injected into the combustion chamber, See

Application/Control Number: 10/657,900 Page 3

Art Unit: 3748

Column 3, lines 17-23) and a second portion (fuel containing in exhaust gas in the

exhaust manifold 10, See Column 3, lines 29-39), comprising the step of:

combusting said first portion of said fuel in a piston engine (1) in a first stage,

said step of combusting said first portion of said fuel in a piston engine (1) in a first

stage producing piston engine exhaust gases (in 10), said piston engine exhaust gases

containing said second portion of said fuel, wherein said step of combusting said fuel in

a piston engine (1) in a first stage comprises said fuel in a nitrogen enriched air

combustion engine (See Figure 1, Abstract, and Column 3, lines 29-39);

combusting (Read as afterburner 12) said second portion of said fuel contained

in said piston engine exhaust gases in said second stage turbine at stoichiometric

conditions (Read as desired air/fuel mixture), said step of combusting said fuel

contained in said piston engine exhaust gases in said second stage turbine at

stoichiometric conditions engine producing turbine engine exhaust gases (See Column

3, lines 46-60); and

using said turbine engine exhaust gases (via 20 to 26) to supercharge said piston

engine and directing said turbine engine exhaust gases into said piston engine (via 26

(See Figure 1).

Note that the exhaust gases are enriched with solid products such as non-

combusted hydrocarbons, carbon monoxide and nitrous gases.

Allowable Subject Matter

Claims 8-15 are allowed.

Applicant's arguments with respect to claims 8-15 and 20 have been considered

but are moot in view of the new ground(s) of rejection.

Conclusion

The prior art made of record and not relied upon is considered pertinent to

applicant's disclosure.

- Kim et al. (US Patent Number 6,470,864 B2) discloses a turbocharged engine

with exhaust gas recirculation.

- Zehnder (US Patent Number 4,250,711) discloses a method and apparatus for

supercharging an internal combustion engine.

- Gladden et al. (US Patent Number 6,301,889 B1) discloses a turbocharger with

exhaust gas recirculation.

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Thai-Ba Trieu whose telephone number is (571) 272-

4867. The examiner can normally be reached on Monday - Thursday (6:30-5:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Thomas E. Denion can be reached on (571) 272-4859. The fax phone

number for the organization where this application or proceeding is assigned is 703-

872-9306.
